Cloud Security & DevOps Engineer

AWS • Kubernetes • Terraform • DevSecOps • Platform Engineering • CI/CD

"Learn relentlessly. Build intentionally. Improve continuously."

PROFESSIONAL SUMMARY

Cloud Security & DevOps Engineer focused on designing, automating, and securing scalable cloud-native infrastructure using AWS, Terraform, Docker, Kubernetes, and modern DevSecOps practices.

Experienced in building production-inspired cloud environments, Infrastructure as Code solutions, CI/CD pipelines, containerized platforms, and observability systems that improve reliability, scalability, operational efficiency, and security.

Passionate about helping organizations modernize infrastructure through cloud automation, platform engineering, DevSecOps, and Site Reliability Engineering principles. Currently advancing expertise through hands-on engineering projects, Kubernetes administration, cloud security, infrastructure automation, and the TechWorld with Nana DevOps Bootcamp.

Core focus areas include AWS Cloud Infrastructure, Cloud Security, Infrastructure as Code, Kubernetes, CI/CD Automation, DevSecOps, Platform Engineering, Observability, and Reliability Engineering.

Core areas of focus include:

- Cloud Security & Secure Cloud Architecture
- AWS Cloud Infrastructure & Platform Engineering
- Infrastructure as Code (Terraform & CloudFormation)
- Kubernetes & Container Orchestration
- CI/CD Automation & DevOps Practices
- DevSecOps & Security Automation
- Observability, Monitoring & Reliability Engineering
- Cloud Automation & Operational Excellence

TECHNICAL SKILLS

Cloud Platforms

AWS (EC2, S3, IAM, VPC, RDS, ELB, Route 53, Auto Scaling, CloudWatch)

Infrastructure as Code

Terraform, AWS CloudFormation

Containers & Orchestration

Docker, Kubernetes, Amazon EKS, Helm

DevOps & Platform Engineering

GitHub Actions, Jenkins, Git, Linux, Docker, Kubernetes, Helm

DevSecOps & Security

IAM, RBAC, Least Privilege Access Control, MFA, AWS KMS, AWS Secrets Manager, Secure CI/CD Practices

Monitoring, Observability & Reliability

CloudWatch, Prometheus, Grafana, ELK Stack, Monitoring & Alerting

Programming & Automation

Python, Bash, YAML

Collaboration & Productivity

GitHub, Notion, Jira, ClickUp

Networking & Architecture

VPC Design, Subnetting, Routing, Security Groups, Network ACLs, Load Balancing, DNS (Route 53), High Availability Design, Disaster Recovery Fundamentals

PROFESSIONAL EXPERIENCE

Cloud Security & DevOps Engineer (Intern)

Digital Witch Support Community | Remote

Jun 2025 - May 2026

Gained hands-on experience designing, deploying, and securing cloud-native infrastructure on AWS while applying Cloud Engineering, DevOps, DevSecOps, and Platform Engineering practices in simulated enterprise environments.

Key Contributions:

- Designed and deployed secure AWS environments using IAM, VPC networking, Security Groups, Network ACLs, and Multi-AZ architectures.
- Built and managed AWS environments using EC2, S3, RDS, Elastic Load Balancing, Route 53, and Auto Scaling.
- Implemented Infrastructure as Code using Terraform and AWS CloudFormation.
- Built CI/CD pipelines using GitHub Actions and Jenkins.
- Containerized applications using Docker and deployed workloads on Amazon EKS (Kubernetes).
- Applied DevSecOps practices throughout infrastructure provisioning and deployment workflows.
- Strengthened cloud security using IAM RBAC, MFA, AWS KMS, and AWS Secrets Manager.
- Implemented monitoring and observability solutions using CloudWatch, Prometheus, Grafana, and the ELK Stack.
- Supported backup and disaster recovery initiatives using S3 Versioning, EBS Snapshots, and Cross-Region Replication.
- Assisted with cloud cost optimization using AWS Trusted Advisor.

Remote IT Operations & Workflow Systems Support (Data & Process Optimization)

Capable Solutions | Texas, USA (Remote)

Sept 2024 - Present

Remote operations role focused on supporting IT-driven workflows, data management systems, and process optimization within a fast-paced technical services environment.

Key Responsibilities & Contributions:

- Supported structured IT operational workflows by maintaining and organizing CRM and business data systems to ensure accuracy, consistency, and reliability across distributed records.
- Performed data validation, cleansing, and transformation tasks, improving the integrity of datasets used for reporting and operational decision-making.
- Assisted in workflow optimization initiatives by streamlining repetitive manual processes and supporting early-stage automation efforts across business operations.
- Contributed to operational reporting and performance tracking by preparing structured reports for visibility into system activities and task execution.
- Managed and maintained CRM platforms and data pipelines, ensuring smooth data flow, proper updates, and system consistency across teams.
- Supported coordination of cross-functional remote teams, ensuring alignment of tasks, processes, and operational workflows in a distributed environment.
- Conducted research and data enrichment to improve input quality for internal systems and support business intelligence needs.
- Helped maintain process reliability and operational consistency in structured IT environments with a focus on accuracy and efficiency.

ENGINEERING PROJECTS

AWS Secure Multi-Tier Infrastructure

- Designed secure AWS architectures using EC2, VPC, IAM, Security Groups, and S3.
- Implemented public and private subnet architecture following security best practices.
- Applied least-privilege access control and scalable infrastructure design principles.

Infrastructure as Code with Terraform

- Infrastructure as Code with Terraform
- Provisioned AWS infrastructure using Terraform modules and reusable configurations.
- Implemented version-controlled Infrastructure as Code workflows to improve deployment
- Automated cloud resource provisioning across multiple environments.

Kubernetes Container Platform

- Containerized applications using Docker.
- Deployed workloads on Kubernetes environments.
- Managed deployments, scaling, networking, and orchestration workflows.

CI/CD Automation Pipeline

- Built automated deployment pipelines using GitHub Actions and Jenkins.
- Implemented build, test, and deployment automation workflows.
- Applied DevOps best practices to improve deployment consistency.

DevSecOps Pipeline Implementation

- Integrated security controls into CI/CD workflows.
- Implemented secrets management and secure deployment practices.
- Applied security-first principles throughout automated delivery pipelines.

Monitoring & Observability Platform

- Built monitoring solutions using CloudWatch, Prometheus, and Grafana.
- Implemented dashboards, metrics collection, and alerting workflows.
- Improved visibility into infrastructure performance and reliability.

CERTIFICATIONS (IN PROGRESS)

- TechWorld with Nana - DevOps Bootcamp (In Progress) Expected Completion: September 2026
- TechWorld with Nana - DevSecOps Engineering Bootcamp (Planned)
- Certified Kubernetes Administrator (CKA Track - In Progress)
- Docker & Kubernetes Mastery Program (Planned)
- AWS Certified Cloud Practitioner (In Progress)
- AWS Solutions Architect Associate (Planned)
- Terraform Infrastructure as Code (Planned)

EDUCATION

TechWorld with Nana

DevOps Bootcamp (In Progress)

Expected Completion: 2026

Ebonyi State University, Nigeria

Bachelor of Science (B.Sc.), Economics
